

## Assignment-1

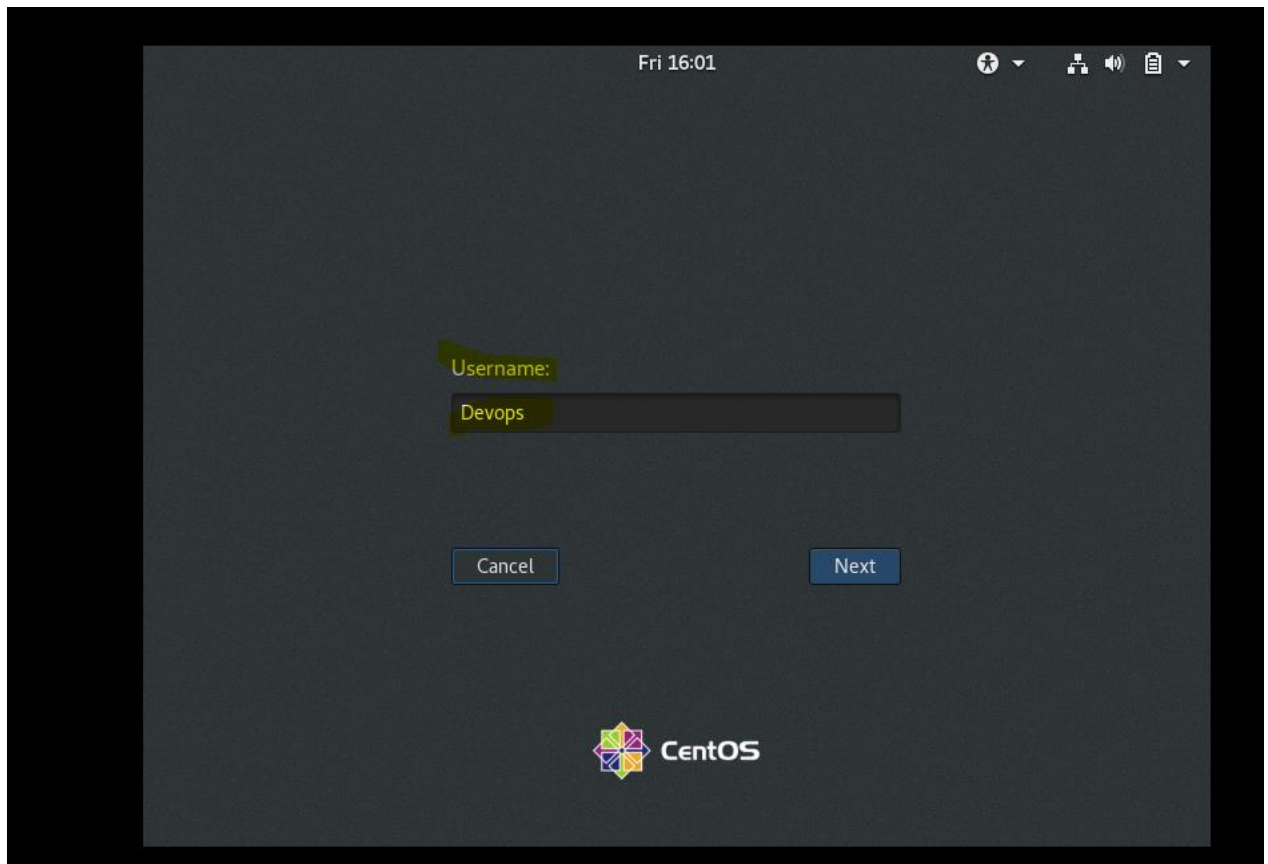

Connect and disconnect with login Access

- What happens when you login a non-existent users or username?
  - Provide Screenshot and What you understand, explain in short brief?

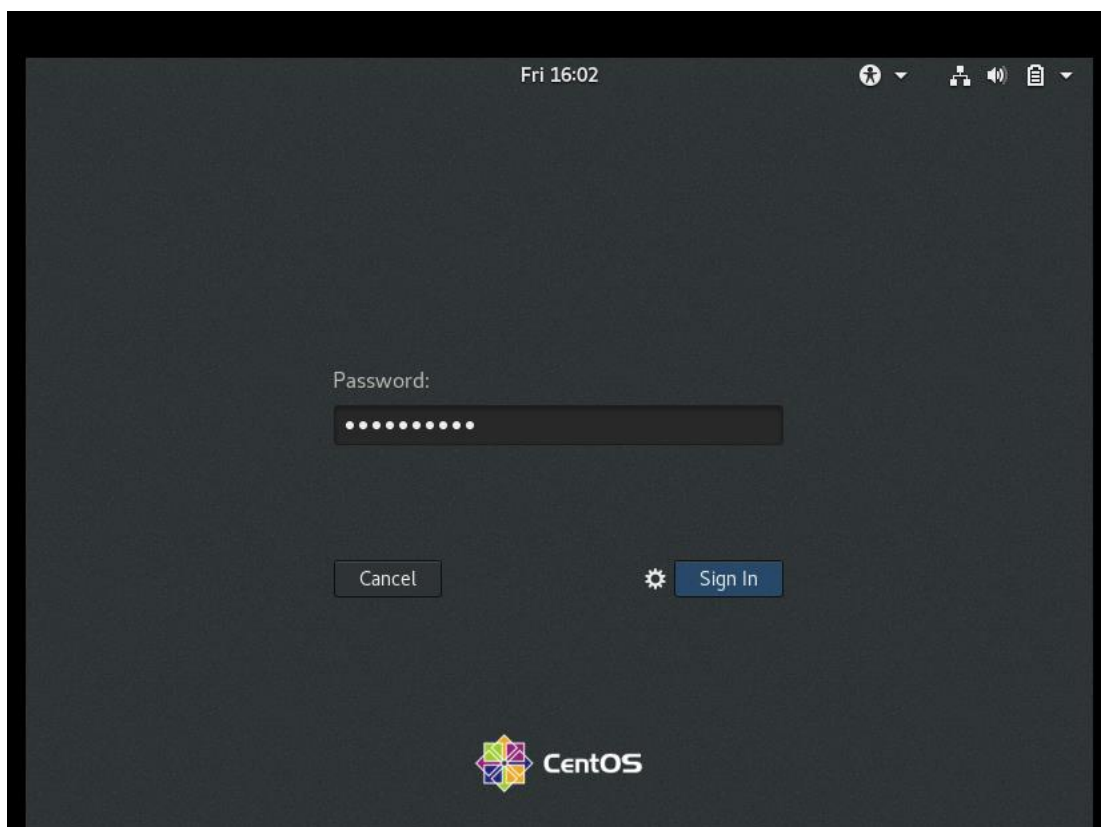

Step 1 :- Trying to logged in with username Devops which we haven't created yet.

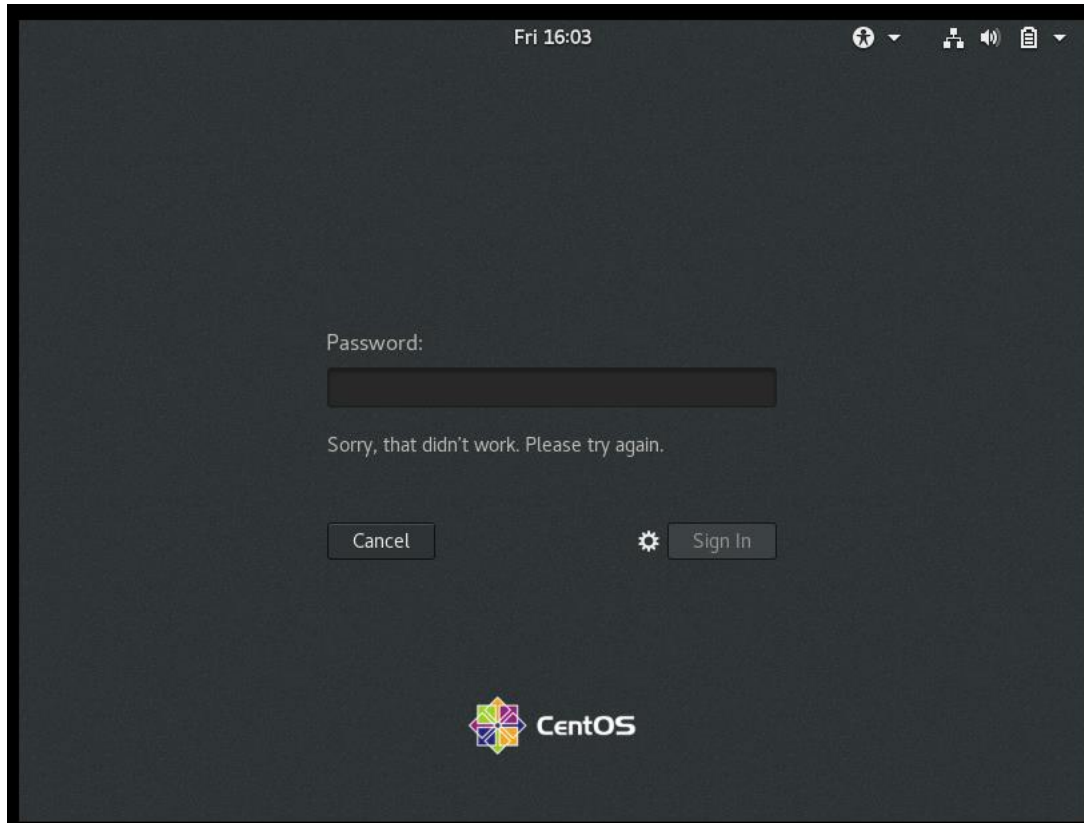

Enter the user name

Entered the password

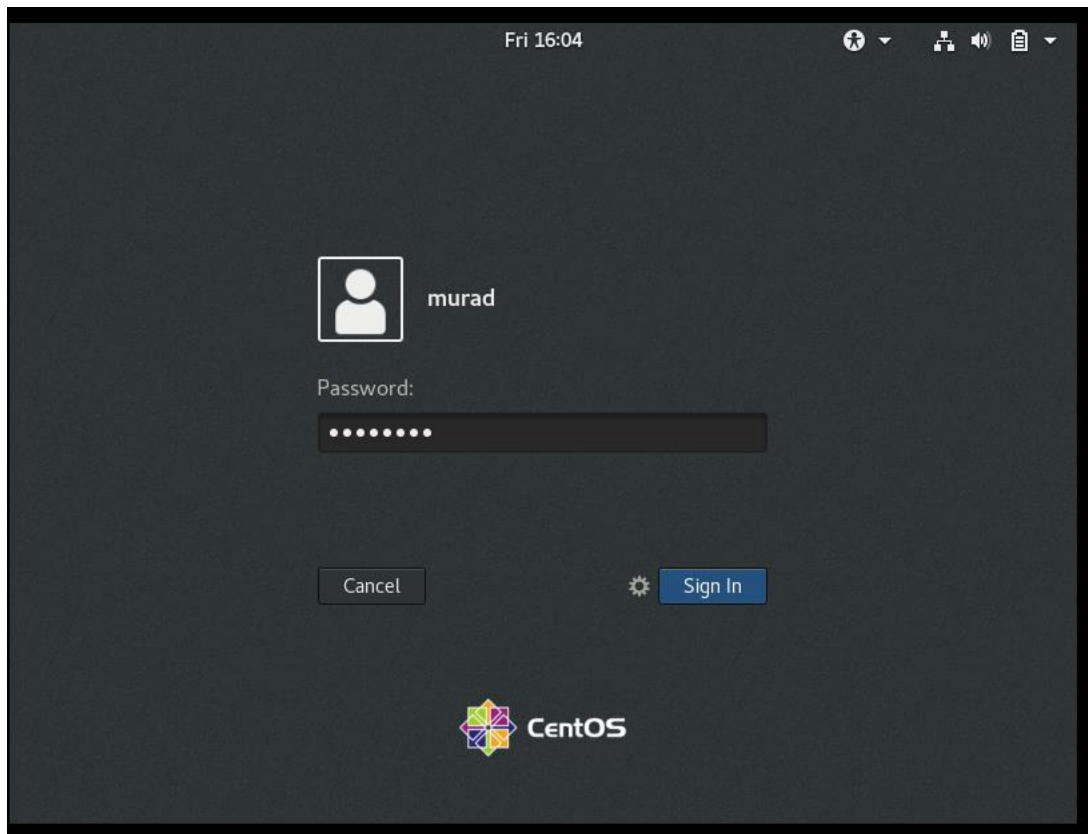

Throwing an error

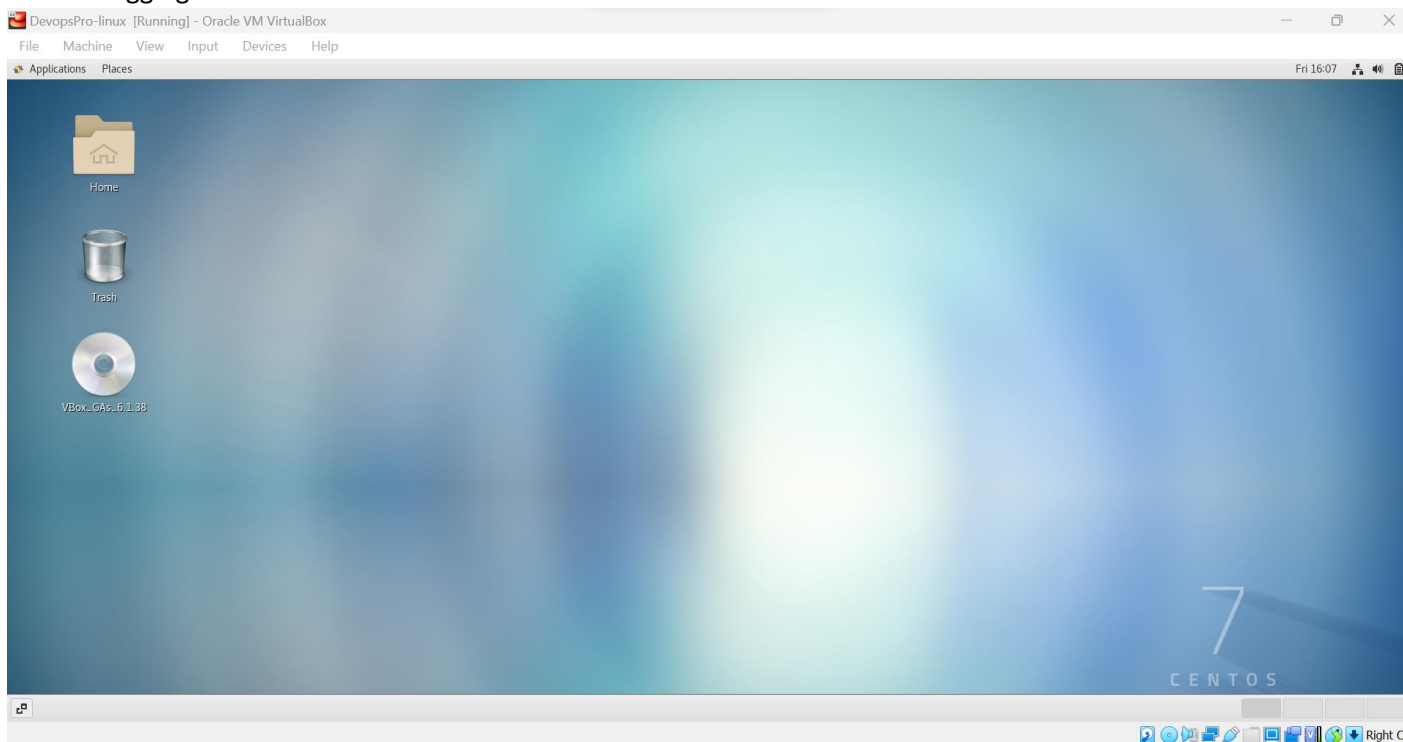

Now Logging with user exist

Step :- Selected the user Murad and entered the password

Now its logging in with full screen

Conclusion: - We have only created with root user and murad as Admin user while installing the OS . Hence, we are able to login with murad. Devops user is not existed because we haven't created yet. We can need to create the user and can we log in.
