Assignment 1: - Install all the dependencies for making centOS full screen

Step 1: - Changed the video memory from 16mb to 128mb > display > oracle Virtual Box (OVB)

Step 2: - open terminal and install the below tools with the below command

sudo yum install gcc -y (it will prompt the password so needs to enter it)

sudo yum install make perl -y (enter the password once it prompt)

sudo yum install kernel-devil-$(uname -r) -y (enter the password once it prompt)

sudo yum install elfutils-libelf-devel -y (enter the password)

Step 3: -Go to devices > insert guest additions CD image (it will prompt cancel or Run)

Click on Run and enter the password or pop up window and then it will start installing tools on terminal

Step 4:- go to View and click on full screen and now its full screen

NOTE :- We can run sudo su to switch user after step 1 to so that no need to run the command with sudo and enter the password.
